Read the following passage carefully and answer the questions given below by choosing the correct option.

The Gaganyaan Mission is India's first human spaceflight initiative, developed by the Indian Space Research Organisation (ISRO). The mission aims to demonstrate India's capability to launch, operate, and safely return a crew of astronauts from low Earth orbit (LEO) using indigenous technology.

For the first crewed Gaganyaan mission, ISRO plans to send a crew of three Indian astronauts into an orbit of about 300–400 km above Earth. The crew will remain in orbit for up to three to seven days, depending on the mission profile, and will then return safely to Earth by splashing down in Indian waters.

The spacecraft consists of a human-rated orbital module comprising a crew module and a service module. The crew module is a pressurized cabin that houses the astronauts, while the service module provides power, propulsion, and thermal control. ISRO has also developed a life support system to maintain oxygen levels, temperature, and pressure inside the capsule, ensuring the crew's survival in the harsh space environment.

To ensure safety, Gaganyaan uses a human-rated version of the LVM-3 launch vehicle (formerly GSLV-MkIII) along with a Crew Escape System (CES). The CES can quickly separate the crew module from the rocket in case of a launch failure, carrying the astronauts away from danger. Re-entry technology, including a specially designed heat shield capable of withstanding extreme high temperatures, protects the crew module as it plunges back into Earth's atmosphere.

Before the crewed flight, ISRO conducts uncrewed test missions (G1 and G2) to validate critical systems. In one of these tests, the Crew Module Atmospheric Re-entry Experiment (CARE) was flown on a sub-orbital trajectory to check parachute deployment and re-entry aerodynamics. The G2 mission will also carry "Vyommitra," a humanoid robot developed by ISRO, to perform onboard tasks and gather data in a simulated human-spaceflight environment.

In the long term, the Gaganyaan programme is expected to lay the foundation for sustained Indian human space exploration, including possible future missions to a space station and deeper space ventures.

SubQuestion No : 47

Q.47 What was the purpose of the Crew Module Atmospheric Re-entry Experiment?

Before the crewed flight, ISRO conducts uncrewed test missions (G1 and G2) to validate critical systems. In one of these tests, the Crew Module Atmospheric Re-entry Experiment (CARE) was flown on a sub-orbital trajectory to check parachute deployment and re-entry aerodynamics. The G2 mission will also carry "Vyommitra," a humanoid robot developed by ISRO, to perform onboard tasks and gather data in a simulated human-spaceflight environment.

In the long term, the Gaganyaan programme is expected to lay the foundation for sustained Indian human space exploration, including possible future missions to a space station and deeper space ventures.
